## WORK EXPERIENCE

### Software Engineer

MONGOOSE RESEARCH

04/2022-11/2022

- Led development on analytics for the chat product
- Planned integrations on a cross-functional agile team with design and product in producing new startup feature flags
- Developed efficient third-party integrations imports using designated API endpoints developed on the backend
- Deployed to development and production environments through Azure pipelines as part of the Mongoose CI/CD process

### Software Engineer

CREDIT KEY

10/2021 - 06/2022

- Using Jest and React frameworks, built out a test suite for the React framework UI
- Built UI enhancements on the loan application feature with the product team with requirements given by product manager and identified functionality improvements with the support team
- Improved UX experiences such as rendering additional user data in the loan application portal

### Founder & Lead Engineer

SPICY GREEN BOOK

06/2022 - Current

- Identified a need to promote Black-owned businesses and launched a nonprofit entity with an online nationwide directory
- Using React Native and Vercel, built a website and mobile app to promote these businesses
- Overseeing all product and executive decisions while creating a collaborative community
- Created an open-source app repository to allow volunteering developers to add to the site and mobile applications
